Why do I need to backup Office 365?

Microsoft provides short-term retention and high availability of Office 365 data—and they let you know upfront that long-term retention—and a lot more—is your responsibility. That's why Microsoft partners with Commvault to enhance Office 365 data protection.

Microsoft provides high availability and short-term retention of your data and content you create and

How is Commvault better at Office 365 backup?

There's a lot of danger from which you need to protect your Office 365 data and content—there's accidental deletion, user deletion, ransomware, malware, service interruptions, and more. With Commvault, you'll be ready—and your Office 365 data will be protected against these potential threats. Other solutions only protect a limited portion of your Office 365 data. Commvault covers more of your data with one solution, eliminating the need for another point solution that would add complexity and cost to your already challenging IT operations.

Commvault makes sure more of your Office 365 data is protected—and all protected with one single solution—a solution built on Microsoft technology that's been protecting data for 20+ years. It's the same solution that Microsoft uses to protect some of its most demanding data. Commvault protects your data and content across Office 365 apps. Whether you use one or more, your information in Exchange Online, SharePoint Online, OneDrive, Project Online, and Teams* is protected with Commvault.

With Commvault, you have more choices of where to back up your Office 365 data—you can store it on public cloud backup, on-premises backup, hybrid cloud backup—or any combination that works for you. You can even have us handle all the details for you with Metallic SAAS backup options. It's all protected by the same proven Commvault technology—and it all provides you with maximum flexibility to meet your needs.

How is Commvault better at Office 365 backup?

- ✓ Across wherever your data lives: Exchange on-premises + Office 365 cloud + more
- ✓ Eliminate the need for another point solution just for Office 365 protection
- ✓ Eliminate the need for another point solution just for Office 365 protection
- ✓ Recover emails and files (down to the granular level) in minutes.
- ✓ Enable enterprise-wide search across all of your data, including Office 365 data with Commvault Complete™ Backup and Recovery
- ✓ Commvault has it all covered for you when it comes to Office 365 data protection with deployment options to meet your exact needs
- ✓ Bullet point about SaaS offering

Reliability, Scalability and Flexibility.

Other solutions do not cover as much of your Office 365 data—nor do they protect it as thoroughly, leaving you at risk of data loss or data corruption. Their options may be limited, and you may need expensive add-ons like cloud connectors or added hardware to make their solutions work as your Office 365 data grows. With Commvault, you have a complete solution that easily scales as your Office 365 data grows.

-  We'll help you prevent data loss and meet your regulatory and compliance requirements.
-  Options to protect your Office 365 data with: Reliability, Scalability and Flexibility.
-  Protecting your Office 365 data is your responsibility—and Commvault is here to protect it.

What choices do I have with Commvault to backup Office 365?

Commvault delivers Office 365 data protection options to match your business model, with unlimited scalability and flexibility.

Metallic Office 365 Backup & Recovery—A SaaS-based option that makes it easy to subscribe, configure, and use. You'll get the most needed features and be up and running in less than 15 minutes. No software, infrastructure, or storage to worry about—Metallic manages it for you.
